

Editor's Comment:

The paper should be accepted for publication after incorporation of the following suggestion.

- Title should be modified as:
Histopathological changes in the kidney of the freshwater bronze featherback fish, *Notopterus notopterus* (Pallas, 1769) exposed to profenofos
- Typographical corrections like spacing, capitalization, punctuation and grammar ect should be corrected in whole paper. Specially avoid unnecessary capitalization.
- Abstract last sentence should be changed as following:

It is concluded that profenofos is significantly toxic to the fish.

- And one more sentence should be included in Abstract as recommendation.
- In materials and method, it should be explain in short, how LD50 dose of Profenofos was prepared.
- Figures should be with self-explanatory and complete title, reader should not required to go the text for understanding.
- Figures number should be reduced by keeping them as under format :

Please paste Figure 1 here and give name as for differentiation below it in the same cell as: a	Please paste Figure 2 here and give name as for differentiation below it in the same cell as: b
Please paste Figure 3 here and give name as for differentiation below it in the same cell as: c	Please paste Figure 4 here and give name as for differentiation below it in the same cell as: d
Figure 1 Main explanation: Morphological deformities: a): explanation; b): explanation	

- Dark Lines of Table may be hide by using Table tool bar to make appropriate for journal style.
- Title of figure should be explain to the point differences in control verses treatments.
- Figures black dard border should be removed
- CONCLUSION should be explain in more detail.

The references are relevant, however, most recent reference is used of 2014, therefore, few recent references should be included of the year 2015-2019.
