

Editor's Comment:

In the review sent to me I could not find the corrections Dr. Biswas asked for. I agreed that are few references but it is not a problem. The procedure done need more details like de model and company that manufacture the stent. Other point is what be done with the guide wire? It is possible to accept the manuscript but I would like the minor corrections in language and a more details of the procedure could be included. If possible some more references including management of left in place guide wires.
