Editorial comments:

The article is interested for theoretical and practical points of view. Using data of heritability of some characters of productivity are very useful for practical breeding of the crop. I recommend to mention information about origin of ten accessions of western African okra from national Centre for PGR only.

Author's feedback:

Thank you for the review. The origin of the ten accessions has been mentioned in our material and method section. The ten accessions were obtained from the germplasm collection of the National Centre for Genetic Resources and Biotechnology, Moor plantation, Ibadan, Nigeria.
