

### **Editorial Comments:**

Please find attached herewith edited manuscript.

### **Author Feedback:**

1. UGIB in title, NSAIDs, GI were re-written as full names.
2. Data "was" analyzed is grammatically correct.
3. Aspirin was corrected.
4. Font of titles were all reformed to "times new roman", if any special font is recommended please let us know.
5. Distortion in distences between words occurred many times during our editing, it seems that font of "word" is distorted while sending the revised article to you. I ask you to consider that as different MS-WORD format of us and yours.
6. We checked the verb for "data" with a native editor and it seems "was' is used instead of "were".
7. Mean was changed to median.
8. Foot not for SSRI has been inserted as one of viewer`s comments. Anyway full name was added to main text and footnote was deleted.
9. All titles were corrected, and all colons were removed.
10. Grammatical points were considered all over the article.
11. All case study groups were changed to study group.
12. Drug names which were written in capital letter were corrected.
