

**Editor's Comment:**

The procedure done need more details like de model and company that manufacture the stent.

Other point is what be done with the guide wire?

I would like the minor corrections in language and a more details of the procedure could be included.

If possible some more references including management of left in place guide wires.

**Author's Reply:**

Thank you so much for your comment, we really appreciate it.

We added more details about the procedure.
