

I am sending my decision as an editor regarding to the Ms_CJAST_49563 "Response of Wheat to Biofertilizer and Nitrogen Treatments - A Review. You can find details and my decision in the enclosed form

This manuscript covers a review about bifertilizers and use of nitrogen. In general, some literatures and/or data from the references were repeat. In addition, there were no an appropriate placement, transition and connection between topics and issues aimed in this review. Unnecessary many sub-titles were given in the text. Thus, if the authors want to prepare a review about this topic, they should give first general information, and then the text should be expand using some certain and experimental data supported by international references. For instance the title of this manuscript does not represent here. It could be "Use of Biofertilizer in Agriculture"

All subtitles should be as follows

1. Introduction
2. Bio fertilizers
3. Effects of Bio fertilizers on Soil Biology and Fertility
4. Effects of Bio fertilizers on use of commercial fertilizers
5. Contribution of Biofertilizers on Crop Yield and Cost
6. Conclusion

As a results, this manuscript should be rejected considering existing conditions of the text
