

SDI Review Form 1.6

Journal Name:	Journal of Geography, Environment and Earth Science International
Manuscript Number:	Ms_JGEESI_49255
Title of the Manuscript:	Impact of Landform on Agricultural Land Use Pattern: A Case Study of Salda River Basin in Purulia District, West Bengal
Type of the Article	Original Research Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<p>Compulsory REVISION comments</p>	<p>ABSTRACT</p> <ul style="list-style-type: none"> • Include a summary of the conclusion of the study <p>INTRODUCTION</p> <ul style="list-style-type: none"> • The reference Sen 1990 has not been fully captured under the references section • Figure 1 should first be cited/mentioned under the introduction section • All abbreviations, e.g C.D., m.a.s.l should first be written in full then subsequently abbreviated <p>RESULTS AND DISCUSSIONS</p> <ul style="list-style-type: none"> • Results and discussions should be objective driven by being organised as follows <ul style="list-style-type: none"> a) Landform characteristics of the study area b) correlation between landform characteristics and agriculture c) problems and prospects of agricultural land use • Each objective should be separately and distinctly analysed. The author should indicate, by bringing to the reader's attention, which analysis is currently being presented/discussed. • The citation from Dunn and Dey 1942 should be included under the references section • The name 'Geological structure of Salda river basin" that is appearing inside Figure 2 should be removed since the said figure already has a title below it. • Further, from Fig. 2, the ordering of legend items should start with lines followed by polygons. This is a basic requirement in cartography/ • The name 'Physiographic division of Salda River basin" that is appearing inside Figure 3 should be removed since the said figure already has a title below it. Do the same for all Figures/maps • Indicate the sources of Figures 4 and 5. • The author has not conducted an analysis depicting the second objective – correlation between land form characteristics and agriculture. As I have stated before, the analysis should be objective driven. Where is the correlation analysis? As for now, it is not clear where the analysis of the second objective begins. <p>CONCLUSION</p> <ul style="list-style-type: none"> • Should be concise and related to the findings of each objective • The author has not indicated the policy implications of the study findings. • The author should give a direction on how the study will add to the existing body on knowledge. <p>REFERENCES</p> <ul style="list-style-type: none"> • The author should consider using a consistent referencing style • Most of the materials under the reference section are not cited in the main text, vice versa. This should be corrected. • References provided are not current. Most of them are more than 20 years old. The author should therefore review current literature and link the same with the study. 	
<p>Minor REVISION comments</p>
